

Convention 2019

Workshop: Violence in Workplace-staying safe

Presentation by John Edwards

Flashlight with strobe recommendation

During the presentation, I did not recommend a specific brand of flashlight. I talk about the tactical type of flashlight. I will list what I recommend the flashlight should have minimally.

- 5-6 inches in length
- At least 500-700 lumens. This is the brightness of the flashlight. The higher the better.
- Activator button on the bottom of the flashlight. The activator button should not be on the tube of the flashlight.
- If the flashlight has a wrist sling, a small O-ring should be attached to the flashlight and then to the sling. This will allow the flashlight to break away should someone grab ahold of it.
- A strobe function is not a requirement. Most have that as an option, but it is not necessary.
- Google tactical flashlight and you will see many different types out there.

Should someone have a question on the flashlight they are looking at, they can email me directly and I will answer any questions they have.
